

## Law Enforcement GPS Tracking System

## IT6-R

Quickly track and monitor criminal activity in real time, decrease costs, and save time with the IT6-R GPS monitoring system.

### Slap & Track

With our built-in 150 lb. pull force magnet, rest assured that once the tracker is placed on the asset, it will remain securely attached. The IT6-R is IP67 rated and rugged by design. It is weather, dust, and water proof. This enables law enforcement to execute operations quickly.

### Near Real Time GPS Tracking

Our system can ping as frequently as every 15 seconds, providing law enforcement personnel with fast data to track assets. Send notifications to multiple personnel and view real time data in our enterprise grade portal.

### Redundant Location Technology

Using the best GPS modules and Cellular antennas, we provide standalone GPS connectivity and assisted GPS positioning all made in the US. In the event that the asset is in a non-optimal environment, the equipment will revert to its onboard redundant system to acquire its position.

### Save time and money

Stake outs are no longer necessary. Attach our GPS and remotely monitor the asset, get alerts when the asset moves or exits a geofence. Law enforcement personnel can maximize productivity and use resources more effectively.

### Specifications

#### Dimensions

3.5" x 2.5" x 1"

#### Power

3000 mAh Internal Rechargeable lithium battery pack and optional wiring harness  
6 month battery life at 4 pings per day

#### Communication

CDMA-1xRTT or GSM using TCP/IP

#### Positioning

Stand-alone and Assisted GPS; typical position accuracy to 3m

#### Protection

IP67 (weather proof and dust resistant)

#### Features

Motion & Tamper Evident Sensors

#### Production

Made in the USA

# 2000+ PINGS/ CHARGE

# 150 LB. PULL
